

Hi, I'm doing user research for an app that helps people make and find new friends. Next, we will conduct an interview, which includes 7 simple questions, which will collect background information from you and inspire the prototype we are going to design. The interview will be recorded throughout.

1. What's your name and how old are you?
2. Where are you from?
3. Where are you currently studying and what's your major?
4. Have you used or heard of any apps for meeting new people or finding new friends in your area? (e.g. Instagram, Tinder, Meetup, etc.)
5. What do you think of this APP?
6. What functions do you think a qualified APP for helping people find friends should have?
7. How do you think a qualified APP that helps people find friends can help users reduce the sense of distance caused by different backgrounds or cultural differences?
